

## Egyptian Mill

The provision of access solutions to support the extensive refurbishment of the Old Cotton Mill, originally built in 1861.

Location: **Bolton**

## Egyptian Mill - Bolton

The Old Cotton Mill, initially built-in 1861 stopped trading after an impressive 100 years. The project is an extensive refurbishment of the Mill into a self-storage facility.

### Project Summary

Our scope was to provide a fully boarded scaffold to cover the Mill and towers, five stories high incorporating fifteen 2.00m high lift(s). Adaptions were also required to install new signage to the high parapet level.

### Value Engineering

The old Mill had several low-level extensions built after its original construction. Therefore, we had to design bespoke solutions which enabled access to difficult locations. Our design team provided a series of solutions, which included securing cantilevered (gallows) brackets to the existing building and envelope by using band and plate fittings.
