

Elsham Reservoir

The facility forms part of our client Anglian Water's estate, which we support through our scaffolding framework. The framework includes both maintenance and project works on a planned and call off basis.

Location: **East Midlands**

Elsham Reservoir - East Midlands

The facility forms part of our client Anglian Water's estate, which we support through our scaffolding framework. The framework includes both maintenance and project works on a planned and call off basis.

Project Summary

This specific project required Enigma to mobilise resources to construct an access bridge to enable Anglian Water engineers to undertake critical repairs throughout a weekend as an emergency response. Our works enabled the client's engineers to undertake critical and urgent activities.

Value Engineering

Effectively and efficiently responding to emergency requests requires overcoming the demands of installing a fully compliant scaffold in both a challenging environment and within a demanding timeframe; something we pride ourselves on time after time.
