

## TATA Steel

The Corby works located in Northamptonshire manufactures approximately 250,000 tonnes of thin-wall welded tube from steel strip every year.

Location: **Corby - Northamptonshire**

## TATA Steel - Corby

The Corby Steelworks located in Northamptonshire is operated by TATA Steel and manufactures approximately 250,000 tonnes of thin-wall welded tube from steel strip every year. With the manufactured tubing used in a wide range of applications, including construction, lifting and excavating, and throughout the energy and power market sectors.

### Project Summary

Enigma Industrial Services have a long-standing working partnership with TATA steel as the sole provider of access solutions. With over 10-years of experience providing a wide range of services at the Corby works, Enigma has in-depth knowledge of site requirements to deliver cost savings for the client. Also, the in-house scaffolding design and engineering teams at Enigma create bespoke economical solutions and method statements for a wide range of complex projects to permit access in confined spaces. Previous projects have included operating from internal cranes whilst working at height and providing access over water.

### Value Engineering

Included within the maintenance contract agreement, Enigma Industrial Services assist TATA Steel to facilitate two fundamental outages on-site at the Corby Steelworks every year. Due to the regular team of Enigma on-site personnel having specific knowledge of the client's outage requirements.
