Management Process

### Business-wide risk management and assessment process system

The QSHE management system solution fully integrating the risk management processes, from identifying and assessing risk business-wide, to assigning and monitoring risk mitigation plans. QSHE also assists with creating indepth reports and defining long-term strategy for enhanced performance.

#### Management Reporting Features

- The dashboard clearly displays a summary of risk assessments, published, unpublished, due in 30 days and expired with a clear identify number.
- Dashboard search function to identify substances and be aware of all submitted SDS requests and Safety Data Sheet document updates.

#### Features & Benefits

- **Plan** - Identify, analyse and evaluate risk.
- **Do** - Proactively manage risk with complete data capture, intuitive workflow and consolidated documentation.
- **Check** - Improve collaboration and transparency reviewing risk assessments for compliance and control objectives.
- **Act** - Consolidate all actions into streamlined milestones with the ability to track progress and set auto-reminders.

**Risk Management Access**

QSHE provides structured access to designated personnel with various access rights dependent on competence and requirement, for example:

- **Read Only** – Individuals can only read authorised information to do so within their hierarchy.
- **Administrator** – Can record but not publish information within their hierarchy.
- **Risk Assessor** - Can record and publish information within their hierarchy.
- **Manager** – Can record, publish information and create folders within their hierarchy.
- **Owner** – Manages the QSHE platform on behalf of the company.

**Benefits**

- Improve performance.
- Ensure compliance with internal and external standards.
- Engage with risk assessors and workforce.
- Continuously update risk assessment libraries.
- Advanced consistent clear risk-awareness throughout the business.
- Intuitive user interface.
- Safeguard company reputation.

**System Management**

Maintain complete control of company settings, location management, user permissions and escalation settings.

**Action Management**

Record corrective, preventative and continuous improvement actions to prevent incident re-occurrence.

**Real-time Reports**

Real-time notifications of incidents and actions that escalate through the organisation structure ensuring everyone remains fully informed.

**ISO Accredited Management System**  
Certified with ISO45001 requirements.
